NETWORK ADAPTER

Installation and user manual

INTRODUCTION

Thank you for choosing our product.

The accessories described in this manual are of the highest quality, carefully designed and built in order to ensure excellent performance.

This manual contains detailed instructions on how to install and use the product. This manual must be stored in a safe place and <u>CONSULTED BEFORE USING THE DEVICE</u> for proper usage instructions as well as maximum performance from the device itself.

NOTE: Some images contained in this document are for informational purposes only and may not faithfully demonstrate the parts of the product they represent.

Symbols used in this manual:

WarningIndicates important information that must not be ignored.InformationProvides notes and useful suggestions for the User.

SAFETY

This part of the manual contains SAFETY precautions that must be followed scrupulously.

- The device has been designed for professional use and is therefore not suitable for use in the home.
- The device has been designed to operate only in closed environments. It should be installed in rooms where there are no inflammable liquids, gas or other harmful substances.
- Take care that no water or liquids and/or foreign bodies fall into the device.
- In the event of a fault and/or impaired operation of the device, do not attempt to repair it but contact the authorized service centre.
- The device must be used exclusively for the purpose for which it was designed. Any other use is to be considered improper and as such dangerous. The manufacturer declines all responsibility for damage caused by improper, wrong and unreasonable use.

ENVIRONMENTAL PROTECTION

Our company devotes abundant resources to analyzing environmental aspects in the development of its products. All our products pursue the objectives defined in the environmental management system developed by the company in compliance with applicable standards.

Hazardous materials such as CFCs, HCFCs or asbestos have not been used in this product.

When evaluating packaging, the choice of material has been made favoring recyclable materials. Please separate the different material of which the packaging is made and dispose of all material in compliance with applicable standards in the country in which the product is used.

DISPOSING OF THE PRODUCT

The device contains internal material which (in case of dismantling/disposal) are considered TOXIC, such as electronic circuit boards. Treat these materials according to the laws in force, contacting qualified centers. Proper disposal contributes to respect for the environment and human health.

© The reproduction of any part of this manual, even in part, is prohibited unless authorized by the manufacturer. The manufacturer reserves the right to change the product described at any time without prior notice for improvement purposes.

DESCRIPTION

OVERVIEW

Netman 204 is an accessory that allows device management through a LAN (Local Area Network); the accessory supports all the main network protocols (SNMP v1, v2 and v3, TCP/IP, HTTP and MODBUS) and is compatible with Ethernet 10/100Mbps IPv4/6 networks. The device can therefore be integrated easily into medium and large-sized networks.

Netman 204 also records device values and events in the history log archive and can manage optional environmental sensors (not supplied with the device, but provided separately)

PACKAGE CONTENTS

Quick start

FRONT PANEL

- A: Network port
- B: LED
- C: Reset button
- D: Micro-USB port
- E: Serial port

Network port

Netman 204 connects to 10/100 Mbps Ethernet networks by means of connector RJ45. The LEDs built into the connector describe the status of the network:

- Left LED SOLID YELLOW: NetMan204 has detected a valid link.
 FLASHING YELLOW: NetMan204 is receiving or transmitting data packets.
- Right LED SOLID GREEN: NetMan204 is connected to a network operating at 100 Megabits per second.

Micro-USB port

NetMan 204 makes available an USB communication port through which it is possible to configure it (see paragraph "Configuration via USB").

Serial port

NetMan 204 makes available a serial communication port to which you can connect environmental sensors (not supplied with the device, but provided separately).

LED

This led describes the status of NetMan 204:

- SOLID RED: NetMan 204 is not communicating with the device (verify PRTK Code).
- FLASHING RED: the DHCP server does not have assigned a valid IP address to NetMan 204.
- OFF: regular working.

GSM Modem (optional)

NetMan 204 can send a notification SMS if one or more alarm conditions occur. The SMS can be sent to up to three recipients and they can be sent for seven different kinds of alarm. An external GSM modem (optional accessory) and a SIM card are required. For more details, see paragraph "GSM Modem"

Reset button

The reset button allows to restart the *NetMan204* or to load a default configuration with a predefined static IP address.

To reset *NetMan204*: keep press the reset button until the red led start flashing (ca. 2 seconds) and then release it.

To load a configuration with predefined static IP address: keep press the reset button; first the led starts flashing, then turns to solid red (ca. 10 seconds). When the led is solid red, release the reset button and the *NetMan 204* will reboot with:

- IP address: 192.168.0.204
- Netmask: 255.255.0.0
- SSH service enabled
- HTTP service enabled

HTTP and SSH service are enabled temporarily without changing the configuration saved in non-volatile memory.

Users

It is possible to access to Netman 204 with four different users:

Username	Default password	Privileges
admin	admin	user with right to modify the configuration ⁽¹⁾
power	N/A ⁽²⁾	user with right to modify the configuration (2)
fwupgrade	fwupgrade	user with right to upgrade the firmware
user	user	user with right to read and download the log files

- (1) Admin user can also operate on the device and therefore shutdown it.
- (2) The user "Power" is disabled by default and has the right to modify the configuration (only via web) but not the right to operate on the device. To enable the user, you must set the password on the web configuration.

NETWORK SERVICES

Netman 204 implements a series of services based on the main network protocols. These services can be activated or deactivated according to requirements (see paragraph "Configuration"). A brief description for each of these is given below.

SSH

By means of a SSH client (available on all the main operating systems) a remote connection with *Netman 204* can be established to change its configuration (see paragraph "Configuration via SSH").

Serial network

To emulate a point-to-point serial connection through the network (TCP/IP protocol) in order to use special function service software.

Wake-on-LAN

Netman 204 can send "Wake-on-LAN" command for remote computers boot.

HTTP

Using the HTTP (Hyper Text Transfer Protocol), is possible to configure the *NetMan 204* and the status of the device can be monitored by means of a web browser without having to install additional software. All the most popular web browsers are supported; only most recent version of browsers are supported.

SNMP

SNMP (Simple Network Management Protocol) is a communication protocol that allows a client (manager) to make requests to a server (agent). *NetMan 204* is an SNMP agent.

To exchange information, manager and agent use an addressing technique called MIB (Management Information Base). There is a MIB file for each agent, defining which variables can be requested and the respective access rights. The agent can also send messages (TRAP) without a prior request from the manager, to inform the latter of particularly important events. SNMPv3 is the evolution of SNMP and introduces new important features related to security.

UDP

UDP (User Datagram Protocol) is a low level network protocol that guarantees speed in the exchange of data and low network congestion. It is the protocol used by the UPSMon software for monitoring and control of the device.

The UDP connection uses the UDP 33000 port by default but can be configured on other ports according to requirements.

Modbus TCP/IP

The device status can be monitored by means of the standard network protocol MODBUS TCP/IP. Modbus TCP/IP is simply the Modbus RTU protocol with a TCP interface that runs on Ethernet.

BACnet/IP

The device status can be monitored by means of the standard network protocol BACnet/IP. BACnet (Building Automation and Control networks) is a data communication protocol mainly used in the building automation and HVAC industry (Heating Ventilation and Air-Conditioning).

FTP

FTP (File Transfer Protocol) is a network protocol used for file exchange. *NetMan 204* uses this protocol for:

- 1. download of files of the device values and events history log archive (Datalog and Eventlog);
- 2. download and upload of configuration files;
- 3. firmware upgrade.

In both cases a client FTP is required, configured with these parameters:

- Host: hostname or NetMan 204 IP address;
- User: see chapter "Users";
- Password: current password.

The connection can also be established using a web browser (all the most popular web browsers are supported), by inserting the hostname or IP address of the *NetMan 204*.

Syslog

Netman 204 can send events to a syslog server over UDP. This service allow to centralize the log of the IT infrastructure on a single server, in order to have them consumed on the preferred way.

Email

Netman 204 can send a notification e-mail if one or more alarm conditions occur. The e-mails can be sent to up to three recipients and they can be sent for seven different kinds of alarm. SMTP (Simple Mail Transfer Protocol) is the protocol used to send the e-mails. The port is configurable. For more details, see paragraph "Configuration"

Reports

Netman 204 can send periodic e-mails with an attachment containing the files of the device values and events history log archive.

This service can be used to periodically save the history log archives.

The "Email" service must be enabled in order to send reports; the reports are sent to all the addresses configured for this service (for more details see paragraph "Configuration").

SSH Client (only for operating system W18-1 or later)

When not feasible to operate on equipment by other means, is possible to execute a script on a host over SSH. For more details, see paragraph "Configuration"

DEVICE VALUES AND EVENTS HISTORY LOG ARCHIVE

NetMan 204 records the device values (Datalog) and events (Eventlog) in a history log database.

Eventlog

The Eventlog service is always active and records all relevant device events in the 'event.db' file. The file can be downloaded via FTP or can be viewed through the web page without credentials. With the "Email report" service, is sent a .csv with the event of the last day or week according to your setting. The data are saved in circular list mode; thus the most recent data are saved by overwriting the oldest data.

On the web page, these icons will be shown on the "type" column:

- A red dot if the event is the start of an alarm condition;
- A green dot if the event is the end of an alarm condition;
- A blue dot otherwise

Datalog (only for UPS devices)

The Datalog service records the main data of the UPS in the 'datalog.db' file.

This service writes a record each hour at 00 minutes, which summarizes the data of the past hour: values are recorded at their minimum, maximum and medium. Records older than one year get overwritten with new records.

The file can be downloaded via FTP or can be viewed through the web page (only the most important values are shown on the web page) without credentials.

With the "Email report" service, the last records (last day or last 7 days according to your settings) will be sent in a .csv format.

ENVIRONMENTAL SENSORS (OPTIONAL)

It is possibile to connect to *NetMan 204* the environmental sensors for monitoring temperature, humidity and digital input/output.

The information provided by these sensors can be showed with the device monitoring and control software or with a web browser.

The values provided by the sensors may also be requested with SNMP according to the RFC 3433 standard (MIB files on the download site).

Available sensors

- Temperature: detects the environmental temperature in °C.
- *Humidity & Temperature*: detects the relative humidity in % and the environmental temperature in °C.
- **Digital I/O & Temperature**: detects the environmental temperature in °C and features a digital input and a digital output.

It is possible to connect up to 3 environmental sensor to a *NetMan 204* (for sensor installation please see the sensors' manual).

INSTALLATION

- 1. Remove the cover of the device expansion slot by removing the two retaining screws.
- 2. Insert NetMan 204 in the slot.
- 3. Secure *Netman 204* in the slot using the two screws removed previously.
- 4. Connect the device to the network by means of connector RJ-45 (see "Specifications for the cabling of the network cable")

CONFIGURATION

OVERVIEW

NetMan 204 can be configured via USB, via SSH or via HTTP.

NetMan 204 comes provided as factory default with DHCP enabled and with the following services active: SSH, HTTP, SNMP, UDP and FTP.

In order to change the configuration of *NetMan 204*, you have to log in as admin (default password "admin").

NetMan 204 needs approx. 2 minutes to become operational from when it is powered up or after a reboot; before this time the device may not respond to commands that are sent to it.

Configuration via HTTP/HTTPS

In order to change the configuration via http/https, you have to insert in your web browser the hostname or IP address of the *NetMan 204* and then log in as admin (default password: "admin").

The HTTPS service uses TLS (transport layer security) in order to provide cryptographic security. However, the certificate used is self-signed and therefore the web browser may prompt a security alert; in this case you can ignore the alert and proceed with the configuration of *NetMan 204*.

Once login has been effected, you can browse through the menus to configure the NetMan 204.

In order to make a new configuration effective, it is necessary to save it. Some changes are applied immediately, while other require a reboot of the *NetMan 204* (as required with a pop-up by your web browser).

Configuration via USB

To configure NetMan 204 via USB it is necessary to:

- Connect, with the USB cable provided, the micro-USB port with the USB port of a PC with Windows operating system.
- If not previously installed, install the USB driver (after driver installation, a virtual COM named "NetMan 204 Serial" will be present in device manager).
- Execute a terminal emulation program with the following settings: COMn ⁽¹⁾, 115200 baud, no parity, 8 databits, 1 stop bit, no flow control.

⁽¹⁾ COMn = COM port assigned to "NetMan 204 Serial" by device manager.

- Press the "Enter" key of the PC.
- At the login prompt, enter "admin".
- At the password prompt, enter the current password (default password: "admin").

During password's typing, no character is shown.

Once login has been effected, the screen of the start menu is displayed. From this screen it is possible to access the various menus to change *NetMan 204* settings (see paragraph "Start menu" and following paragraphs).

Configuration via SSH

To configure NetMan 204 via SSH it is necessary to:

- Execute a SSH client on a PC connected in a network to *NetMan 204* set with the IP address of the device to be configured.
- At the login prompt, enter "admin".
- At the password prompt, enter the current password (default password: "admin").

During password's typing, no character is shown.

For proper configuration of *NetMan 204*, you must configure the SSH client so that the backspace key sends "Control-H". Please verify the keyboard options of your SSH client.

Once login has been effected, the screen of the start menu is displayed. From this screen it is possible to access the various menus to change *NetMan 204* settings (see paragraph "Start menu" and following paragraphs).

CONFIGURATION MENU DESCRIPTION

Start menu

Once login has been effected via SSH or USB, a screen like the following is displayed:

Function	Description	
Setup	To enter main configuration menu	
View status	To see the status of the device	
Change password	To modify the password (see also Password recovery)	
Service log	To generate a log file of the card (when requested by the service)	
Wi-Fi setup	To configure Wi-Fi connection For Wi-Fi connection, an optional card is required. The Wi-Fi card is n provided with <i>NetMan 204</i> but it has to be purchased separately.	
Factory reset	Restore factory configuration	
Expert mode	To enter Expert mode (more information at paragraph "Expert mode")	

To move within this menu and the following menus, use the keys as described in the following table; the arrow or the cursor shows the current selection.

Кеу	Function	
Direction keys (Arrow up, down, right, left)	To move the cursor within the menus	
Tab	Goes on to next option	
Enter (1)	Choice of submenu	
Enter	Confirmation of characters entered	
Esc ⁽¹⁾	Exit main menu ⁽²⁾	
	Return to previous menu	

⁽¹⁾ Some keys can have a different function depending on the menu.

⁽²⁾ To exit from a menu a confirmation ('Y' or 'N') is required after pressing the ESC key.

Setup

The main configuration menu displays a screen like the following:

From this main menu it is possible to access the various submenus, the function of each of which is shown in the table below.

Menu	Function	
IP config	To configure the network parameters	
Wi-Fi setup	To configure Wi-Fi connection For Wi-Fi connection, an optional card is required. The Wi-Fi card is not provided with <i>Netman 204</i> but it has to be purchased separately.	
Enable Sensors	To enable the environmental sensors	
Sensors Config	To configure the environmental sensors	
Expert mode	To enter Expert mode (more information at paragraph "Expert mode")	
Factory reset	Restore factory configuration	
Reboot	Reboots the Netman 204	

IP config

// / IP config / //	
Hostname:ups-server	
IP address/DHCP:DHCP	
Netmask:	
Gateway:	
Primary DNS:	
Secondary DNS:	

With this menu the main network parameters can be set as described in the following table.

Field	Parameters to be inserted	
Hostname	Enter the NetMan 204 host name	
IP address/DHCP	Enter the IP address for a static IP; enter "DHCP" for a dynamic IP	
Netmask	Enter the netmask to be used together with the static IP address	
Gateway	Enter the name or the address of the network gateway	
Primary DNS	Enter the name or the address of the preferred DNS to be used	
Secondary DNS	Secondary DNS Enter the name or the address of the alternative DNS to be used	

If a static IP address is assigned to the device, all the fields must be configured with the network parameters. If a dynamic IP address is assigned, just enter 'dhcp' in the "IP Address/DHCP" field and provide a hostname; all the other options should be ignored because these are automatically configured with DHCP

After pressing "ESC" and "Y" to confirm exit from the menu, a screen similar to the image below is displayed. Press the "ENTER" key to return to the main menu and the configuration will be immediately applied.

et	:h0	Link encap:Ethernet Hwaddr 00:02:63:04:07:b1 inet addr:10.1.11.19 Bcast:10.1.255.255 Mask:255.255.0.0
		inet6 addr: fe80::202:63ff:fe04:7b1/64 Scope:Link

		TX packets:4899 errors:0 dropped:0 overruns:0 carrier:0
		collisions:0 txqueuelen:1000
		RX bytes:12740380 (12.1 MiB) TX bytes:2115614 (2.0 MiB)

WEB CONFIGURATION

Login

After setting up the network, all the settings are available on the web configuration when logged is as "admin" or "power" user. Is not possible to have multiple concurrent sessions.

Netman 204	Device Model VST 1500	System status LOAD ON INVERTER	
Welcome			
	LOGIN WITH LOCAL AUTHENTICATION Usemame I Password LOGIN VIEW		

The login password must contain alphanumeric characters and these special characters: , ._+:@%/-. No other characters are allowed to avoid malicious script injections.

Please note that user "fwupgrade" and "user" are not allowed to log in on the web page. Either use "admin", "power" or enter without password.

- Admin user will be able to change the configuration and operate on the device
- Power user will be able to change the configuration but not operate on the device
- Entering without password allows to view the status of the device; no other action is permitted.

Netman 204	Device Model VST 800	System status STAND-BY	
Welcome			
	LOGIN WITH LDAP authentication Username john Password	·	
	login view		

It is possible to login with local authentication (managed by *Netman 204*) or centrally with LDAP or AD (more information at paragraph "Login access configuration").

Dashboard

On the top area is possible to check the general status of the device, all the active alarm conditions and the privilege level of the user.

Below the navigation area there is the actual dashboard with a synthetic view of the device and main operating values.

On the bottom, there are the values of the environmental sensors (if installed and configured).

SNMP (Simple Network Management Protocol) is a communications protocol, a tool that allows the client (manager) to effect requests to a server (agent). This protocol is an international standard and so any SNMP manager can communicate with any SNMP agent.

To exchange information, the manager and agent utilise an addressing technique called MIB (Management Information Base). MIB defines which variables can be requested and the respective access rights. MIB is equipped with a tree structure (like the folders on a hard disk), through which manager and agent can use several MIB at the same time, as there is no overlap.

Each MIB is oriented to a particular sector; in particular RFC-1628, also called UPS-MIB, holds the data for UPS remote management.

Furthermore, the agent can submit data without a prior request to inform the manager about particularly important events. These messages are called traps.

For more information about SNMP visit this site: <u>http://www.snmp.com</u>.

Netman 204 can send a periodic message in JSON trap format that contains the status and the values of the UPS. The trap can also be sent on the specified conditions.

Field	Parameters to be inserted
Enable JSON	Enables the JSON notification service
Monitoring host IP	Enter the IP address to which send the JSON traps
Host port	Enter the port where traps will be sent
Notification interval (minutes)	Enter the interval between JSON trap sending
Send notification on event	Choose the even upon which the trap will be sent

It requires a license.txt file to be uploaded on the *Netman 204*. The content of the file will be included in the trap.

Example trap:

```
Γ
  {
    "timestamp": 1464255869,
    "model": "UPS 6kVA",
    "license": "00-B3-74-98-ED-43=2D84-1234-9E4B-5FAD",
    "io_conf": 1,
    "status": [ 123, 255, 0, 97, 132, 12 ],
    "measures":
    {
      "vin1": 231,
      "fout": 499,
      "load1": 0,
      "load2": 0, // (2)
"load3": 0, // (2)
"vbat": 817, // V/10
"authonomy": 475, // min
      "batcap": 100,
      "tsys": 33
    }
 }
1
```

timestamp is the instant of the trap in reference to Unix epoch.

model is the model of the UPS.

io_conf is the UPS configuration, some values depends on it (see notes).

license is the content of the license file.

status is an array that must be interpreted as follows:

byte	bit	Description
0		UPS Mainteinance
	1	Communication lost
	2	Battery low
0	3	Battery work
0	4	On bypass
	5	UPS Failure
	6	Overload/Overtemperature
	7	UPS Locked
	0	SWIN Open/Battery Low
	1	SWBYP Open/Battery Working
1	2	SWOUT Open/UPS Locked
	3	Output Powered
	4	SWBAT Open

	5	SWBAT_EXT Open
	6	Battery not present
	7	Battery overtemp
	0	Buck Active
	1	Boost Actived
	2	O.L./L.I. function
2	3	Load threshold exceeded/On Bypass
2	4	EPO command active
	5	BYPASS command active
	6	Service UPS
	7	Service battery
	0	Replace Battery
	1	Battery Charged
	2	Battery Charging

	Host or VCSA	Username Administrator	@vsphere.lc	

This menu enables the configuration of the VMware Esxi shutdown service. Any Esxi host or part of a vSphere infrastructure or the included vCenter server appliance can be shut down, it is possible execute a vMotion in order to move active VM from a host or Cluster to a specific target, each with their separate credentials, priority and delay.

The validity of the credentials is checked periodically and, if not valid, an alarm is generated. It is also possible to shutdown the UPS at the end of the hosts shutdown process.

ATTENTION

The VMmware infrastructure has to be installed with a valid license, a free of charge installation doesn't work properly, due to the API access limitation, the virtual machines and the physical servers cannot be shut down due this system limitation.

The slider "Enable ESXi shutdown" enable the ESXi shutdown service.

Infrastructure connectors

Field	Parameters to be inserted	
Host or VCSA	Enter the hostname or IP address of the ESXi host or VCSA

SAVE

Actions

Field	Parameters to be inserted
Action	The action that will be executed: Shutdown VM will shutdown the specific VM Shutdown Host will shutdown all the active VM on the specified host and finally the host itself Shutdown Cluster will shutdown all the active VM on the specified cluster and all hosts part of the cluster VMotion will move all the active VM from a source host to a target host Maintenance will force a host in maintenance mode

Condition	 Power fail: When the UPS detects a main failure, the configured condition duration time (minutes) will begin to countdown. Once the timer has elapsed the selected action will start. If the main returns within this time, then the action will be cancelled. Autonomy less: When the calculated battery autonomy of the UPS falls below the configured condition duration time(minutes) the selected action will start. If main returns within this time, then the action duration time(minutes) the selected action will start. If main returns within this time, then the action will be cancelled.
Condition duration (minutes)	The duration that the selected condition (Power fail or Autonomy less) must be active for before the selected action starts.
Delay next (seconds)	Delay in seconds to execute the next action
Source	If the action is Shutdown Host , VMotion or Maintenance ; an IP address or hostname of a present host or VCSA must be specified. If the action is Shutdown VM or Shutdown Cluster a valid VM name or Cluster name, present in the infrastructure must be specified.
Target	If the action is VMotion , a valid IP address or hostname must be specified
Restore on power on	In case of shutdown actions the <i>Netman 204</i> will restart automatically all the VMs that where shutdown. In case of Maintenance action the <i>Netman 204</i> will restore the host from maintenance. Please note that to restart the host the Wake on Lan feature must be used instead.
Target Netman	For future use.

The priority order of the actions in the action list can be changed, selecting and moving the action row up or down with the mouse.

NOTE

The vSphere DRS automation function can be used by forcing the target host in Maintenance mode.

SHUTDOWN ON EVENT

It is possible configure the UPS shutdown delay in seconds, this counter will start at the same time of the shutdown actions listed on the Action list.

Additionally, the commands will be executed when on battery low condition and when shutdown is active.

SAVE

This button SAVE the configuration, please note that the service will be restarted.

It is possible to test the procedure without performing a real shutdown by pressing "Dry Run". The logs on the target Prism CVM will confirm the correctness of the configuration.

Validating the connections

It is also possible to test the correct user account and password to login on a Prism CVM. The test will return the result with a pop-up screen.

Syneto

CONFIGURE ESXI AUTOSTART FUNCTIONALITY

Syneto HYPER appliances have the Autostart functionalities enabled by default on the ESXi hypervisor. This is a mandatory prerequisite so that virtual machines can be powered on or off in the right order when the request is made from Netman 204.

Configure the virtual machines that must be powered on the hypervisor in their desired order. SynetoOS and SynetoFileRecovery are always first and second in the list.

CONFIGURE ESXI USER & ROLE FOR REMOTE POWER MANAGEMENT

Syneto recommends to configure an ESXi user to be used especially for power management duties by the UPS. This provides a level of security that limits potential attack vectors. Connect to your ESXi host with the Web client.

1. Create a new Role.

Go to Host -> Security and Users -> Roles.

Role PowerMgmt added successf					
Host	System Hardware I	Licensing Packages Services	Security & users		
Manage Monitor	Acceptance level	🕂 Add role 🧪 Edit role 🗙 Rem	love role C Refresh	Q Search	
🔁 Virtual Machines 🚺 10	Authentication Certificates	Name	~ Summary		~
▼ ▲ LucianS_0105_5.176_5.13	3 Users	Administrator	Full access rights		
Monitor	Roles	Anonymous	Not logged-in user (cannot be granted)		
qa2000.dev.syneto.net	No access	Used for restricting granted access			
More VMs	Lookuowii indue	No cryptography administrator	Full access without Cryptographic operations privileges		
Storage 10 Networking 3	PowerMgmt	PowerMgmt			
Q Networking		Read-only	See details of objects, but not make changes		
		View	Visibility access (cannot be granted)		

Click on Add Role. Give the new role a suggestive name, for example: PowerMgmt.

Choose the following from Privileges:

Root -> Host -> Config -> Power.

¹⁴ 🕂 Add a role		
Role name (required)	PowerMgmt	
Privileges	Root Host Config	
	NetService	
	Memory	
	Network	
	AdvancedConfig

Yes			100	

Click Add user. You have now setup a user which can be used for power management on the ESXi host.

CONFIGURE NETMAN 204 FOR HOST SHUTDOWN

Connect to Riello UPS Netman 204 via the web interface. Go to Configuration -> Remote Hosts -> Syneto

DASHBOARD	DATA	SYSTEM OVERVIEW	HISTORY	CONFIGURATION	ADMINISTRATION	
YOUR NE	TMAN 204	SENS	ORS	MODEM	REMOTE HOSTS	
REMOTE HOS	TS SHUTDOWN	J				
REMOTE HOS	13 SHOTDOWN

		In	frastructur	e connectors		
			SXi Hypervisor	Username	Password	
			192.168.1.27	ups		Delete
		4				•
						Add Row

Check the box for Enable Syneto shutdown
In the section Infrastructure connectors, click on the Add Row button. You will connect Netman 204 to the ESXi host.

- Enter the following:

ESXi Hypervisor	The ip address of your ESXi host or Vcenter
Username	The username you created for power management (eg: ups)
Password	The username you created for power management (eg: ups)

- In the section Actions, click on the Add Row button. You will define the action to take on the ESXi host.

- Enter the following:

Action: Shutdown host	Shutdown the host		
Condition:	 Power fail: When the UPS detects a main failure, the configured condition duration time(sec) will begin to countdown. Once the timer has elapsed the selected action will start. If the main returns within this time, then the action will be cancelled. Autonomy less: When the calculated battery autonomy of the UPS falls below the configured condition duration time(sec) the selected action will start. If main returns within this time, then the action duration time(sec) the selected action will start. If main returns within this time, then the action will be cancelled. 		
Condition duration (minutes):	The duration that the selected condition (Power fail or Autonomy less) must be active for before the selected action starts. We recommend at least 15 minutes.		

Actions

	Action	Condition	Condition duration (min)	Delay next (s
0	Shutdown VM 🖌	Autonomy less 🗸	15	
•				÷

Actions

Delay next (sec)	Source	Target	Restore on power on
4			۱.
			Add Row
shutdown is	the commands will be execu	ited when on battery low condition and w	hen
SAVE			

The Riello UPS with *Netman 204* will shutdown all virtual machines that are included in the Autostart functionality in the inverse order: last virtual machine in the list will be shutdown first.

SHUTDOWN ON EVENT

It is possible configure the UPS shutdown delay in seconds, this counter will start after the shutdown actions listed on the Action list.

Additionally, the commands will be executed when on battery low condition and when shutdown is active.

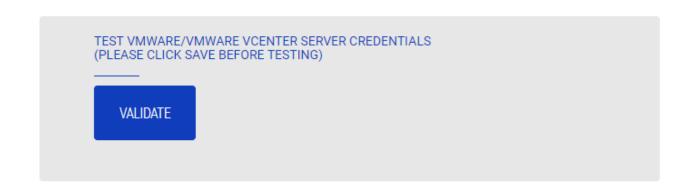

SAVE

This button SAVE the configuration, please note that the service will be restarted.

	ARE VCENTER SERVER A BEFORE TESTING)	PPLIANCE SHUTDOWN	
DRY RUN			
DRY RUN			

Testing the configuration

It is possible to test the procedure without performing a real shutdown by pressing "Dry Run". The logs on the target host or vCenter Server Appliance will confirm the correctness of the configuration.

Validating the connections

It is also possible to test the correct user account and password to login on the VSphere VCSA. The test will return the result with a pop-up screen.

NTP & Timezone configuration

Some *Netman 204* services require a correct date and time in order to work properly. It is therefore necessary to configure them as soon as possible to avoid malfunctions.

Netman 204	Device model VST 800	System status STAND-BY	C	Alarm NONE ~	ADMIN ~	*
DASHBOARD DATA SY	STEM OVERVIEW HIST	ORY CONFIGURATION	ADM	INISTRATION		1

EMA	AILS			Email #1	Email #2	Email #3	

This menu may be used to configure the addresses to which to send the alarm notification and report e-mails and other parameters of the e-mail service as described in the following table.

Field	Parameters to be inserted
Enable Email	Enables the Email service
Mail host	Enter the name or the address of the SMTP server to be used to send e-mails. ⁽¹⁾
SMTP port	The IP port used by the SMTP protocol
Sender address	Enter the address from which the e-mails are sent. ⁽²⁾
Username	If the server requires authentication, insert the "User name".
Password	If the server requires authentication, insert the password.
Transport	It is possible to choose between plain, SSL or TLS.
Email #1	
Email #2	Enter the e-mail addresses to which to send the alarm notifications and reports (see note).
Email #3	
Device events	Choose the event upon which the email will be sent
Send report every day	Sends the email report every day at 00:00
Send report every week	Sends the email report every Monday at 00:00

⁽¹⁾ Ensure that the SMTP server accepts connections on the configured port

⁽²⁾ Do not use the "space" character in this field

After inserting the data and saving, the service can be tested. If the test is performed, a test email is sent to all the configured email addresses.

Report e-mails are sent to all the addresses inserted; for alarm notification e-mails see paragraph "*Email logic*".

Email logic

The following table describes the meaning of the events. These can vary depending on the device connected.

Event	Meaning				
Device Lock	Device is locked or in a severe failure state				
Ovrload/Ovrtemp	Device in overload or in overtemperature				
General Failure	Failure of the device				
On bypass	Operation from bypass				
Input blackout	The input source is in blackout				
Battery low	Battery low				
Communic lost	Communication between the <i>Netman 204</i> and the device has been interrupted				

GSM Modem

	On Bypass	3
	Input blackout	Humidity high [%RH]
	Battery Low	80
		Humidity low [%RH]
	Communication lost	0
	Input sensor	Humidity hysteresis [%RH]

Field	Parameters to be inserted
Enable sensors	Enables the sensor service
Contact logic	Choose between normally open or normally closed
Output contact	Choose the output signal to be activated on event
Temperature high [°C]	Enter the high temperature threshold
Temperature low [°C]	Enter the low temperature threshold
Temperature hysteresis [°C]	Enter the temperature hysteresis
Humidity high [%RH]	Enter the high humidity threshold
Humidity low [%RH]	Enter the how humidity threshold
Humidity hysteresis [%RH]	Enter the humidity hysteresis

As well as being configured, the sensors must also be activated to function correctly (see paragraph "Sensors config").

Sensors Config over SSH or USB

To enter on the "Sensors config" menu is necessary to enable the "Sensors" service and to reboot the *NetMan 204*.

Enter on the "Config sensor" menu, connect the first sensor and press "C". After some instants the device will be recognized and the device will be given an identifier number [1]. Connect the next sensor, if present, and press "N". After some instants the device will be recognized and the device will be given an identifier number [2]. Repeat the procedure for all the sensors and when the configuration is finalized press "Y".

For proper working of the devices, it is necessary to add just one device for each iteration and wait that it is recognized by *NetMan 204*.

Example: how to connect a *Temperature* sensor, a *Humidity* & *Temperature* sensor and a *Digital I/O* & *Temperature* sensor in exactly this order.

Sensor list	
Press [C] to change sensors, [E] to exit	

Connect the first sensor (Temperature), and press "C".

Sensor list 1) Temperature	[F100000013BE0628]	
Press [Y] to confirm, [N	l] to insert a new sensor	

Wait until the first sensor is identified and then connect the second sensor (*Humidity & Temperature*), and press "N".

Wait until the second sensor is identified and then connect the third sensor (*Digital I/O & Temperature*), and press "N".

Press "Y" to confirm.

Login access configuration

Netman 204	Device model VST 1500	System status LOAD ON INVERTER		~ 🚷 🕷	/elcome DMIN 🗸
DASHBOARD DATA	SYSTEM OVERVIEW	HISTORY CONFIGURATION	ADMINISTRATION		
ADMINISTRATION	DEVICE CO	OMMANDS			
ADMINISTRATION					
Firmware upgrade		Enable USB			
Reset to defaults					
Reset Log		Enable SSH			
Reboot					
Login access		Enable HTTP			
		HTTP port	80		
		Enable HTTPS			
		HTTPS port			
		Enable Local authentication (NOTE: adr	nin is always available on SSH)		
		Enable AD/LDAP authentication			

It is possible to manage the login via LDAP or AD. The user must be present on the server and must belong to a specified group. If the group is the "Admin group" then the user will be granted the "admin" privileges. If the group is the "Power group" then the user will be granted the "power" privileges (i.e. without the privilege of performing shutdown on the device). After configuration, on the login screen it must be insterted only the username (instead of the full Distinguished Name) and the password.

Field	Parameters to be inserted
Enable USB	Enables login over USB cable
Enable SSH	Enables login over SSH
Enable HTTP	Enables the HTTP service
HTTP port	Enter the port where HTTP service is started (default: 80)
Enable HTTPS	Enables the HTTPS service
HTTPS port	Enter the port where HTTPS service is started (default: 443)
Enable local authentication	Enable local authentication
Enable LDAP/AD authentication	Enables login via LDAP or AD
Server address	The address of the server, can be either Idap:// or Idaps://
LDAP users folder	The folder of users allowed to log in
Admin group name	The group with "Admin" privileges
Power group name	The group with "Power" privileges

Examples of LDAP server addresses:

ldap://myserver:389/ ldap://10.1.10.99:389/

Over secure socket:

ldaps://myserver:636/ ldaps://10.1.10.99:636/

If the user "john" is present on the LDAP server and it belongs to the configured groups, it will be possible to login with username "john" and its LDAP password.

Password recovery

If the default password for the admin user is changed and forgotten, it is possible to recover it with the unlock key provided by the service department of the manufacturer.

To obtain the unlock key, you must send to the service department the service code of your *NetMan* 204. This code can be read via USB or via HTTP.

Via USB log in to NetMan 204 with user "user" and password "user".

Via HTTP when you insert an incorrect password you are offered a link to a password recovery. Click the link to start the recovery.

In both case a message like this will be shown:

To restore the default password, please enter the unlock key. If you don't know it, please send to service this code: 204:XX:XX:XX:XX:XX:XX

Please note that the unlock key is valid only for the corresponding service code which is specific for every *NetMan 204*.

Wi-Fi setup (optional card required)

For Wi-Fi connection, an optional card is required. The Wi-Fi card is not provided with *NetMan 204* but it has to be purchased separately.

After installing the optional Wi-Fi card, you can access to the "Wi-Fi setup" menu.

For *NetMan 204*, Wi-Fi is an exclusive alternative to cabled Ethernet: only one at time can be used. Therefore, after enabling Wi-Fi, it is not more possible to use cabled Ethernet.

After selecting Wi-Fi setup you get this prompt:

Insert 'n' to use Ethernet or 'y' to use Wi-Fi. In the latter case, a list of available Wi-Fi access points will be shown with the following request:

```
Please insert the SSID you want to connect without quotes
```

Type the SSID of the desired Wi-Fi access point.

Please insert the password for <Wi-Fi access point>

Here you insert the authentication password for Wi-Fi.

After confirmation, you will return to the Main setup. At the next boot the *NetMan 204* will use Wi-Fi instead of Ethernet.

Expert mode

Expert mode enables the configuration of advanced parameters that should be set by skilled technicians. These commands are supported:

help	prints the help
get	shows all values
set <var> <value></value></var>	set VAR to VALUE
delete <var></var>	removes VAR
<pre>sendtrap + <trapcode></trapcode></pre>	send a test SNMP trap (alarm added)
sendtrap - <trapcode></trapcode>	send a test SNMP trap (alarm removed)
testemail	send a test email
reboot	reboot the NetMan 204
erasefram	erase the FRAM module
clearlog	clear data log and event log
exit	closes the connection

CONFIGURATION OF SEVERAL DEVICES

If several *NetMan 204* have to be configured with similar parameters, you can configure the first *NetMan 204*, then connect via FTP with the admin user, download all the configuration files in the folder /cfg, and upload all them via FTP in the folder /cfg of all devices to be configured.

In case of problem or If Netman 204 does not behave as you would expect, it is recommended to download the service log.

To create and download the service log do the follow:

- 1. Log in as "admin"
- Click on "System overview"
 Click "Download service log"

The service log will be downloaded in a few seconds. It must be sent to your local authorized service center to properly diagnose the problem.

FIRMWARE UPGRADE

The Netman 204 firmware can be updated via HTTP or via FTP.

A valid upgrade file is named fwapp.204. If you downloaded a .zip file, you need to extract a fwapp.204 from the folder that matches the operating system of the *Netman 204*.

FIRMWARE UPGRADE VIA HTTP

Netman 20	04	Device model VST 1500	Syste	em status ON INVERTER		~ (Welcome ADMIN ¥	
DASHBOARD	DATA S'	YSTEM OVERVIEW	HISTORY	CONFIGURATION	ADMINISTRATION			
ADMINIS	TRATION	DEVICE CO	MMANDS					
ADMINISTRA	TION							
Firmware	upgrade	Appl	ication ver	sion 03.07.00	1 [e589]			
Reset to d	defaults							
Reset Log	ı		UPLOAD A FIRM	WARE COMPATIBLE WI	TH SYSTEM VERSION S19-2			
Reboot								
Login acc	ess		C)rag & drop he	ere your firmware	file		

Connect via HTTP to the *Netman 204* to be upgraded inserting in your web browser the hostname or IP address and then log in as admin (default password: "admin"). Then click on the "Administration" page.

Drag and drop the upgrade file. When the upgrade file is uploaded, the *Netman 204* will reboot automatically.

FIRMWARE UPGRADE VIA FTP

Connect via FTP with the user "fwupgrade" (default password "fwupgrade") and copy the updated firmware on the /fwupgrade folder. Then restart the card by pressing the reset button.

SNMP CONFIGURATION

For configuring SNMP, is possible to use the wizard web page for a simple configuration. Advanced configuration requires to edit snmp.conf. This file can be downloaded and uploaded from the web page or via FTP with user "admin" (default password: "admin").

Each line of the file is parsed by NetMan 204 and must begin with one of these keyword:

- #: for comment, the line is skipped.
- *addUser*: for adding a new user and setting the passwords
- *addGroup*: for putting a user into a group
- *addAccessEntry*: for enabling access privileges to a group
- addView: for adding privileges
- addManager: for adding SNMP Manager which will receive SNMP traps.

The correct syntax for addUser is:

addUser <userName> <authProtocol> <privProtocol> <authPassword> <privPassword>

<userName> is the name of the user.

<authProtocol> is the protocol for authentication of this user during SNMP sessions. Possible values are:

- *noauth* (no authentication will be used)
- *md5* (MD5 will be used for authentication)
- sha (SHA will be used for authentication)

<privProtocol> is the protocol for privacy of this user during SNMP sessions. Possible values are:

- nopriv (no privacy will be used)
- *des* (DES will be used for privacy)

<authPassword> is the password for authentication. It must be set to * when not used. <privPassword> is the password for privacy. It must be set to * when not used.

The correct syntax for addGroup is:

addGroup <securityModel> <userName> <groupName>

<securityModel> is the security model. When using authentication and/or privacy, securityModel must be USM. Possible values are:

- USM (User-based Security Model with SNMPv3)
- v2 (SNMPv2)
- v1 (SNMPv1)

<userName> is the name of the user, must match one of the user name defined with addUser. <groupName> is the name of the group.

Please note that a userName can be assigned to only one group.

The correct syntax for addAccessEntry is:

addAccessEntry <groupName> <contextName> <securityModel> <securityType> <contextMatch> <readView> <writeView> <notifyView>

<groupName> is the name of the group to which this access right applies, must match one of the group name defined with addGroup.

<contextName> is the name of the context.

<securityModel> is the security model that must be used in order to gain access to this access right, must match the security model defined with addGroup.

<securityType> is the minimum security level that must be used to gain access to this access right. Possible values are:

• *noauthnopriv* (no authentication and no privacy)

- *authnopriv* (authentication but no privacy)
- authpriv (authentication and privacy)

<contextMatch> the type of match required. Possible values are:

- exact (the context name must exactly match the value in contextName)
- *prefix* (the context name must match the first few starting characters of the value in contextName)

<readView> the authorized MIB view name used for read access, must match one of the view name. <writeView> the authorized MIB view name used for write access, must match one of the view name. <notifyView> the authorized MIB view name used for notify access, must match one of the view name.

The correct syntax for addView is:

addView <viewName> <subtree> <mask> <included>

<viewName> is the name of the view.

<subtree> is the OID subtree which when combined with the corresponding instance of MASK defines a family of view subtrees.

<mask> the mask for filtering OID.

<included> the OID can be included or excluded. Possible values are:

- *included* (for including)
- excluded (for excluding)

The correct syntax for addManager is:

addManager <security> <ipAddress> <credentials> <securityType>

<security> is the security type for the notification. Possible values are:

- USM (User-based Security Model with SNMPv3)
- V2 (SNMPv2)
- *v1* (SNMPv1)

<ipAddress> is the IP address of the SNMP manager.

<credentials> is either the user name (when using USM security) or the trap community (when using v1 security)

<securityType> is either:

- noauthnopriv (for SNMPv1 and SNMPv2)
- authpriv (for SNMPv3)

addManager do not allow duplicate entries (one ipAddress can receive only one trap).

A sample snmp.conf is provided; the default users authorized are:

Name	Auth protocol	Priv protocol	Auth password	Priv password
unsecureUser	Noauth	nopriv		
MD5	md5	nopriv	MD5UserAuthPassword	
SHA	Sha	nopriv	SHAUserAuthPassword	
MD5DES	md5	des	MD5DESUserAuthPassword	MD5DESUserPrivPassword
SHADES	Sha	des	SHADESUserAuthPassword	SHADESUserPrivPassword

Trap explanation:

OID	Description
1.3.6.1.2.1.33.2.0.1	Sent whenever the UPS transfers on battery, then sent every minutes until the UPS Comes back to AC Input.
1.3.6.1.2.1.33.2.0.3	Sent whenever an alarm appears. The matching alarm oid is added as binded variables in the alarm table.
1.3.6.1.2.1.33.2.0.4	Sent whenever an alarm disappears. The matching alarm oid is added as binded variables in the alarm table.

MODBUS TCP/IP PROTOCOL

This service is active on the TCP port 502. The supported function are listed below, together with the accessible registers.

64	63	Sensor 2 temperature	°C
65÷72	64÷71		

(1) The register number n must be addressed n-1 in the data packet.

Some measures may not be available for all the UPS. In this case, the relative register remains at 0xFFFF value.

EVENTLOG CODES

EVENT	DESCRIPTION
Battery low	Battery Low or Shutdown imminent
On battery	On battery
On bypass	On bypass
UPS lock	UPS lock
UPS fail	UPS failure
Overload	Overload
Overtemperature	Overtemperature
Output off	Output off
Bypass bad	Bypass bad
Comm lost	Communication lost
Battery bad	Battery bad
UPS generic alarm (SENTR)	UPS generic alarm (SENTR)
UPS internal alarm (SENTR)	UPS internal alarm (SENTR)
IRMS blackout	IRMS blackout
IRMS overload	IRMS overload
Synchro bad	Synchronisation wrong
Overload/overtemp	Overload/Overtemperature
xTS failure	ATS/STS failure
transfer active	Load Transfer active
source S1 bad	Source S1 bad
source S2 bad	Source S2 bad
MANUAL_BYPASS_ACTIVE_C01	Manual bypass active
LOW_INPUT_VOLTAGE_A01	Low input voltage
HIGH_INPUT_VOLTAGE_A02	High input voltage
OVERLOAD1_F01	Overload output 1
OVERLOAD2_F02	Overload output 2
OVERLOAD3_F03	Overload output 3
OVERLOAD4_F04	Overload output 4
OVERLOAD5_F05	Overload output 5
OVERLOAD6_F06	Overload output 6
OVERLOAD7_F07	Overload output 7
OVERLOAD8_F08	Overload output 8
LOW_INPUT_CURRENT_F09	Low input current
HIGH_INPUT_CURRENT_F10	High input current
POWERFAIL_AUX1_F11	Powerfail auxiliary powersupply 1
POWERFAIL_AUX2_F12	Powerfail auxiliary powersupply 2
OVERLOAD_LOCK1_L01	Lock due Overload output 1
OVERLOAD_LOCK2_L02	Lock due Overload output 2
OVERLOAD_LOCK3_L03	Lock due Overload output 3
OVERLOAD_LOCK4_L04	Lock due Overload output 4
OVERLOAD_LOCK5_L05	Lock due Overload output 5
OVERLOAD_LOCK6_L06	Lock due Overload output 6
OVERLOAD_LOCK7_L07	Lock due Overload output 7
OVERLOAD_LOCK8_L08	Lock due Overload output 8
TMAX1	Temerature high sensor 1
TMIN1	Temperature low sensor 1
Input1	Input contact sensor 1
Hum1	Humidity high sensor 1

Hum low1	Humidity low sensor 1
TMAX2	Temerature high sensor 2
TMIN2	Temperature low sensor 2
Input2	Input contact sensor 2
Hum2	Humidity high sensor 2
Hum low2	Humidity low sensor 2
TMAX3	Temerature high sensor 3
TMIN3	Temperature low sensor 3
Input3	Input contact sensor 3
Hum3	Humidity high sensor 3
Hum low3	Humidity low sensor 3
TMAX4	Temerature high sensor 4
TMIN4	Temperature low sensor 4
Input4	Input contact sensor 4
Hum4	Humidity high sensor 4
Hum low4	Humidity low sensor 4
TMAX5	Temerature high sensor 5
TMIN5	Temperature low sensor 5
Input5	Input contact sensor 5
Hum5	Humidity high sensor 5
Hum low5	Humidity low sensor 5
TMAX6	Temerature high sensor 6
TMIN6	Temperature low sensor 6
Input6	Input contact sensor 6
Hum6	Humidity high sensor 6
Hum low6	Humidity low sensor 6

SERIAL PORT CONFIGURATION

NetN	lan 204		Modem			
R	J-12		DB-25	DB-9	DESCRIPTION	
POSITION	DESCRIPTION		POSITION	POSITION	DESCRIPTION	
1	+5V _{DC}					
2	GND	LEAVE UNCONNECTED				
3	Environmental sensors bus

5	RXD	\leftarrow CONNECT TO \rightarrow	3	2	TXD	
6	TXD	\leftarrow CONNECT TO \rightarrow	2	3	RXD	

TECHNICAL DATA

NETWORK CABLE

To connect the device to the Ethernet (10Base-T) or Fast Ethernet (100Base-T) network, a UTP (Unshielded Twisted Pair) or STP (Shielded Twisted Pair) cable with RJ45 connectors is required. The cable must conform to the standard IEEE 802.3u 100Base-T with 2 pairs of UTP cables of category 5 or higher. The cable between the adaptor and the hub must not be more than 100m and not less than 2.5m.

NETWORK CABLE CONNECTIONS		
Signal	Pin # to Pin #	
TX+	$1 \leftrightarrow 1$	
TX-	$2 \leftrightarrow 2$	
RX+	$3 \leftrightarrow 3$	
RX-	$6 \leftrightarrow 96$	

Pins 1 and 2 must be connected to one twisted pair, pins 3 and 6 to another.

OPERATING AND STORAGE CONDITIONS

Operating temperature range	[°C]	0 ÷ +40
Storage temperature range	[°C]	-5 ÷ +50
Maximum operating relative humidity	[%]	80
Maximum storage relative humidity	[%]	90

LEGAL INFORMATION

The firmware of *Netman 204* includes some open source components. For more information please visit the website of the manufacturer.
